## Information, channels and errors

CODING THEORY  
Yuri. Bazlov @  
manchester.ac.uk

Alphabet  $F$ : a finite set  
Symbol: an element of  $F$   
Information: a long sequence of symbols

What is  $\mathbb{F}_2 = \{0, 1\}$

## Model of information transmission: noisy channel

What event is symbol error?

$$y \neq x$$

The  $\text{BSC}(p)$  channel ← MEMORYLESS

$$0 \leq p < 1/2$$

$N$  bits transmitted; probability of 0 errors?

"bit" = an element of  $\mathbb{F}_2$   
= "binary symbol"

$$(1-p)^N$$

## Challenge

Send 80,000 bits via  $\text{BSC}(0.01)$ .  $P(\text{zero errors})$ ?  $E(\# \text{ of times need to resend until 0 errors})$ ?

$$(1-0.01)^{80000}$$

$$n = 80000$$

$$\left(1 + \frac{x}{n}\right)^n \xrightarrow{n \rightarrow \infty} e^x$$

$$\frac{x}{n} = -0.01 \Rightarrow x = -0.01 \times 80000$$

$$(1-0.01)^{80000} \approx e^{-8} < 10^{-100} = -800$$

## What is a code and how does it *detect* errors?

MAIN PRINCIPLE:

The SENDER  
ONLY  
SENDS  
CODEWORDS.

$$F^n = \{ (x_1, \dots, x_n) : x_i \in F, \forall i=1, \dots, n \}$$

Code (of length  $n$ ) is  $C \subseteq F^n, C \neq \emptyset$

Worked examples:  $E_3 = \{000, 011, 101, 110\} \subseteq \mathbb{F}_2^3$

$Rep(3, \mathbb{F}_2) = \{000, 111\}$

binary codes  
of length 3

## Detected and undetected errors

DETECTED  
ERROR:  
 $y \notin C$

Assume that the codeword 111 of  $Rep(3, \mathbb{F}_2)$  is sent. Describe the following events and give examples:

- no error  $y = 111$
- detected error  $010$  as  $010 \notin Rep(3, \mathbb{F}_2)$
- undetected error  $000$

## The Hamming distance

$F = \{1, 2, 3\}$

$$d(x, y) = \# \{ i : 1 \leq i \leq n, x_i \neq y_i \}$$

$$d(123, 321) =$$

1 2 3  
3 2 1  
X V X  $d=2$

## Correcting errors

A decoder for  $C$  is a function  $DECODE: F^n \rightarrow C$  such that  $DECODE(y)$  is a nearest neighbour of  $y$  in  $C$ .

Draw all 3-bit binary words and show how each word is DECODED to a codeword of  $Rep(3, \mathbb{F}_2)$ .

RECEIVED 101  $\rightarrow$  DECODE  $\rightarrow$  111

Challenge: can an undetected error be corrected?
